

Energy and risk management solutions tailor-made for our Nordic customers

Origination for the Nordic market

Our mission is to provide best-in-class service to renewable generators, industrial consumers and retailers in the Nordic market, offering cost-efficient energy and risk management solutions that are tailored to our client's specific requirements in each individual case. We do this by having local presence and close relationships with our clients, while sharing the benefits of using Alpiq's swift, flexible and efficient centralised resources.

Alpiq Energy Nordic AS is the Norwegian subsidiary through which the pan-European Alpiq Group is present in the Nordics. From our offices in Oslo we offer local Origination products and services, as well as manage our Nordic renewable generation assets.

Our hands-on experience of own wind power projects and small scale hydro assets helps us understand the needs of asset developers and owners also in our Origination offering.

Alpiq has a long history in the Nordics. Our focus is now Origination related to renewable assets, industry customers and resellers.

Products and services

Combining the benefits of our local presence and expertise with the capabilities of a pan-European trading house allows us to provide access to all important markets and be a fully-fledged energy service provider.

Standard products

We offer standard products based on all listed physical and financial contracts for liquid and non-liquid delivery periods and can cover the specific needs of our clients for hourly blocs, profiles and time swaps, in various currencies.

- Spot (intraday and day-ahead power)
- Futures (baseload, peak, off-peak power)
- Options (month, quarter, year on power)
- EPAD (price area spreads for power)
- Elcertifikat
- Guarantees of Origin
- EUA (CO2 emission rights)

Structured Products

Alpiq has a long tradition of operating hydro power plants in the Alps, from which we have developed solid expertise in monetising flexibility. This translates very well into the Nordic market where we offer to sell and purchase virtual power plants and other structured products.

We can also structure cross-commodity products tailored to client needs.

Supply and Off-take (PPA)

For industrial consumers we take care of all requirements involved in providing you with physical power supply, while working together to tailor the hedging solution that fits best with your needs, whether you seek fixed prices or more flexible long-term energy procurement.

If you are an owner, investor or developer of renewable production assets and looking to find a partner to take care of the physical output, balancing needs and risk exposures, we can offer you transparent and tailor-made Power Purchasing Agreements (PPA) that covers your specific requirements, along with those of potential co-investors and creditors.

In addition, we offer asset owners cutting edge, real-time data management to support in optimising the operation of assets. This also allows us to minimise the imbalance cost, a benefit shared with our customers. We can also help you manage your risk in price area spreads, certificates and any other green products.

Other services

- Market Access
- Asset Management
- Ancillary services partnership
- 24/7 Optimization services

Contact us

When you come to us, we commit to working with you to find the best solutions for you exclusively, with a long-term perspective for our continued cooperation. Contact us to learn more about our products and services:
